One number is correct but in the wrong place

Maths learning after COVID 19

by Selvi Wensor

The children I see today, have all experienced schooling through the Covid pandemic. The remote learning that happened in those two years have changed the way we learn and teach mathematics.

Teachers had to adopt to new ways of teaching and parents were involved in their children's everyday learning. Children had to be more responsible for their learning and resourceful when it came to doing assignments.

What we all learned and made use of during the pandemic times are still valuable for post pandemic times. The article (please copy the address below into your browser) is an extract from what some of the experts in mathematics learning came up with as valuable lessons learned from the pandemic.

This two minute read lets us reflect on what we have done right in those two years and talks about how we can make use of those strategies now. It's a very useful article for anyone interested in how maths education is progressing.
