### Puzzle of the Month

$$\text{fish} + \text{bean} + \text{fish} = \text{skewer}$$

$$26 - \text{skewer} = \text{watermelon slice}$$

$$\text{watermelon slice} + \text{watermelon slice} = 2$$

$$\text{fish} + \text{fish} = \text{watermelon slice} + 9$$

$$\text{skewer} - \text{bean} = ?$$

## Advice for completing General Maths Exam Questions

by Selvi Wensor

**Pay closer attention to wording of the questions.** This was the case when you encountered a question on bivariate data when you had to read carefully and eliminate the answer which almost looks correctly but not quite right.

**Make it a point to remember the symbols and their corresponding words.** For example, the word for  $r$  and  $r^2$  are totally different and they only put the words in the exam questions. You are expected to know what they want you to calculate.

**If you think your arithmetic, especially working with directed numbers is not strong, use the calculator.** It's better to get the answer correct when you know what to do rather than lose a mark due to arithmetic.

**Don't guess an answer if you have the time to work it out.** If you think you know how to work it out, it's worth it to work it out rather than guessing it because it looks correct.
